

AI Workforce does the credentialing. Your team oversees it.

Credentialing one placement means untangling confusing placement requirements, reviewing every document, chasing candidates for what's missing, and ordering the right services without ordering ones you don't need.

AI Workforce consolidates placement requirements for each candidate, recommends the screenings needed and drives each file to completion. Your team monitors status and approves actions.

Built into Bullhorn

Lives in the KarmaCheck tab your specialists already use. Candidate records are pulled in and results filed back automatically.

What AI Workforce does

Every requirement for every role, in one place

Facility, state, MSP and agency rules arrive in every format. AI Workforce consolidates them and does the heavy lifting, turning them into a clear checklist per role.

Every candidate checked at placement

A requirement checklist is created automatically, showing what's met and unmet from the documents on file.

Every gap found, the next action recommended

From asking the candidate for what's missing to the packages and screenings to order, each action is queued for approval. The checklist updates as results come back.

Nothing's finalized without your approval

Approve actions in one touch or individually. Your team handles what needs judgment: exceptions, waivers and escalations.

One candidate, today and with AI Workforce

☐ Your team ☒ AI Workforce

Today Your team does every step, file by file

Review every document

Manual validation and re-entry

Compare documents to requirements

Complex, changing requirements

Order packages and services

Easy to over-order or under-order

Track to completion

Constant monitoring for updates

With AI Workforce Your team starts at review

See a requirement checklist per placement

Pre-generated: what's met and unmet

Review and approve

Recommended actions, one-button approval

Oversee completion

Real-time status on every requirement

The AI Workforce difference

Effortless and accurate

AI Workforce does the hard work of credentialing, so your team can focus on getting candidates to the bedside.

Mitigate audit risk

AI Workforce improves document quality and process consistency as it works, which reduces risk at audit time.

Bigger desks, same team

When specialists oversee the process instead of doing every step, volume grows without new hires.

Start credentialing the new way, with AI Workforce.
